First Cutovers to New Version 4 Highly Successful

Huntington Station, NY – Comview Corporation, a leading provider of telecom cost management services, has announced that the newest version of their Web-Based Call Accounting Outsourcing Services system has successfully moved from testing to implementation at several customers.

Over the last two years, Comview Corporation worked with its long-time customers as well as their newer ones to determine what new features they desired and what features would help these industry leaders accomplish their telecom management goals and tasks. Once that list was compiled, Comview Corporation brought aboard the necessary resources and completed one of the most comprehensive, easy-to-use, feature-rich systems available today.

Version 4 is a fully integrated Call Accounting and Wireless management system including rate plan optimization, automatic carrier notification of changes, inventory information, and automated chargeback. Version 4 is lightening-quick by making extensive use of Ajax technology. Version 4 supports drag 'n drop, cut, paste and other Windows-like features for ease of use.

Comview Corporation began implementation of Version 4 early last quarter and it is now in place for many of its established customer base and all of its new customers. John Perri, President of Comview Corporation states, "I have received calls from several of our customers who told me how much they appreciate Version 4, but didn't even realize there were features over and above our prior version that they could use. Now, to quote the words of one multi-site client, 'they are addicted to' the reports and information they have gleaned for our new system."

Comview Corporation

Founded in 1997, Comview Corporation is a leading provider of telecom and cost management services. Comview takes the hassle out of telecommunications management by providing outsourced web-based Call Accounting, Comprehensive Audit, Web-based Wireless Management and related services. Comview saves its customers substantial day-to-day management time and reduces telecom operating expenses. Its services are used by major organizations throughout the U.S. and abroad.
