## Global Wireless Management

### Consolidated Wireless Management and Reporting for North American Global Companies

For enterprises with presence in multiple countries, centralized oversight of wireless telecom can have tremendous financial and operational advantages.

But managing and making sense of the myriad of international mobile carrier invoices (with different formats and currencies) across the organization can be a difficult and time-consuming challenge to say the least.

Comview's integrated wireless expense management solution simplifies life for North American global enterprises by aggregating international wireless invoices, users and devices on a single, cloud-based management and reporting platform for consistent control and insight over mobile operations.

Configurable reporting that shows normalized native and base currency values, helps you understand and compare mobile spend across the entire organization so you can manage it more effectively.

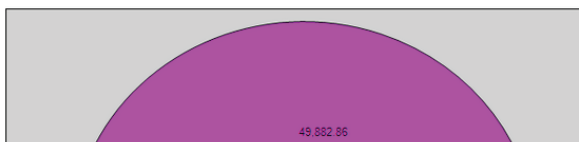

#### Comview's Global Capabilities Include:

- A single, cloud-based platform for all global users and devices
- Normalized invoicing and reporting across countries, carriers and locations
- Support for local currencies and formatting
- Selectable base currency for easy comparison
- International data processing for 145 wireless carriers in 45 countries and growing
- Consolidated business intelligence reports for global usage and more
- Audit and optimization
- Bidirectional integration with AirWatch MDM
- Time-tested international call accounting
- Integrated part of Comview's fixed/wireless telecom management platform backed by award winning customer-centric support

#### "Total Spend by Country" report shows expenses in both native and selected base currency amounts and formats
